

A scatter plot within an ellipse, divided into four quadrants by dashed horizontal and vertical axes. The plot displays four distinct clusters of points, each represented by a different color: orange, blue, green, and red. The orange cluster is located in the top-left quadrant, the blue cluster in the top-right, the green cluster in the bottom-right, and the red cluster in the bottom-left. The points are distributed such that each cluster is well-separated from the others, suggesting a clear classification or segmentation of the data.
